

You use 6000 kilowatt hours to power your home each year.

Do you worry about where that energy will come from in the future?

Do you wonder how much higher your energy costs will climb?

NyackWindFarm.com is a grass-roots movement dedicated to exploring alternatives for energy production and usage within Rockland County. Through promoting community awareness, researching energy economics, and working with local leaders, we hope to initiate wind turbine projects that will supply clean renewable electricity.

Find information about the favorable local wind conditions. Check out the energy news blog. Share your ideas—and your expertise—in a community forum.
